DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 40-44, and 47-50, drawn to methods comprising the detection of p14 peptide in samples from subject.

Group II, claim(s) 45, 46, and 51-53, drawn to methods comprising the detection of anti-p14 peptide antibodies in samples from a subject.

Group III, claim(s) 54-58, drawn to methods of treatment comprising the administration of anti-p14 antibodies.

Group IV, claim(s) 59, drawn to methods of treatment comprising the administration of a p14 peptide in an amount effective to elicit production of anti-p14 antibodies in a subject.

Group V, claim(s) 60-64, drawn to pharmaceutical compositions comprising anti-p14 antibodies.

Group VI, claim(s) 65, drawn to a pharmaceutical composition comprising p14 peptide or an immunogenic fragment thereof.

The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the feature that is common to groups I, III and V is anti-p14 antibodies; whereas the feature that is common to groups II, IV and VI is p14 peptide; an anti-p14 antibody is disclosed in Hoch-Marchaim (Hoch-Marchaim, H. et al., *Virology*, 313: 22-32, 2003), as is a p14 peptide (see Figure 1, and see page 30, left column). Therefore, an anti-p14 antibody or a p14 peptide does not make a contribution over the prior art as a whole and cannot be considered a special technical feature that unites the different invention groups.

The technical feature of Group I is the use of an anti-p14 antibody in a method of detection.

The technical feature of Group II is the use of a p14 peptide in a method of detection of p14 antibodies.

The technical feature of Group III is the use of anti-p14 antibodies in a method of treatment.

The technical feature of Group IV is the use of a p14 peptide in a method of treatment.

The technical feature of Group V is an anti-p14 antibody.

The technical feature of Group VI is a p14 peptide.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
